

Features & Technical Summary

Features	Benefits
Based on Microsoft .Net framework	Ensures compatibility with the latest Microsoft technology for easy deployment of software solutions
Data storage available in multiple database formats	Choose from MS Access, SQL Server & Oracle databases
Enhanced system security with multi-user passwords & login profiles	Prevents unauthorised system access & automatically defaults to users unique preferences
Design wizards for databases, screens & cards	Step by step assistance for instant set up & ease of use
Feature-rich card design module	Create unlimited card designs per person (incl. dual) for all industry standard printers
Multiple record view & batch selection	Enables multiple visibility of database records by defined criteria eg: departments, class list
Magnetic stripe, barcode, contact & contactless smart card encoding	Ability to encode wide variety of cards directly
Integral database with unlimited record capacity	For instant stand alone system set up
Ability to bolt-on to existing ODBC compliant data sources (eg: Access Control / HR systems)	No need to re-key data or for local storage therefore reduces duplication of resource
Database switch facility	Multiple databases, eg: staff or students, can be accessed from one log in
One click image capture & enhancement from wide variety of cameras & capture devices	Fast & efficient capture of images for maximising card production throughput
Ability to add signature or fingerprints	Enhances security
Audit trails & advanced reports module	Added security with full visibility eg: time, date and user who produced cards
PDA handheld PC software option	For offline data & image capture on remote sites
E-mail error messaging	Provides additional & speedy assistance for support contract holders giving added peace of mind
Multi-language options	Use across global sites in local language

System Requirements

Windows 2000 / XP
 Pentium 2Ghz class PC
 512 RAM (recommended)
 100 MB free disk space
 Screen resolution 1024 x 768
 Video capture board
 TWAIN compliant / USB video or image capture
 TWAIN compliant scanners or fingerprint capture

IDPro Card Production Software

IDPro is the most comprehensive card production software available for the public sector. Designed by Payne Security's programming team, IDPro has been continually developed since 1996 from the feedback and suggestions received from our customers. This has maintained IDPro's position as the most user friendly and powerful card production software available in the market.

IDPro7 – Card Software for Public Sector is tailored to the unique demands of local authorities, government and health service providers. Pre-defined screens, databases & card designs allow you to capture details and produce cards for the wide variety of public sector applications.

IDPro – Meeting the Needs of the Public Sector

The card requirements of local authorities, government and health service providers are all very different. From the capability of linking to existing business applications such as Time & Attendance or Human Resource systems, to a stand alone package producing staff ID or visitor passes, IDPro7 is as versatile as you require. And being based on the latest Microsoft.Net framework together with a choice of database technology ensures IDPro7 is able to operate within the secure technical demands of public sector IT networks.

The feature-rich design enables databases and cards to be produced for multiple uses – be they for certification such as taxi licences and proof of age or authorised entry cards for environmental health and social services. Secure photo ID cards can easily be produced to meet the needs of the Disability Discrimination Act clearly identifying staff in the community such as healthcare workers and emergency services personnel.

At Payne Security our experience with IDPro and the requirements of the public sector mean we understand what you need and will work with you to design, create and support an ID card system relevant for your organisation.
